**PRIORITY  
DOCUMENT**SUBMITTED OR TRANSMITTED IN  
COMPLIANCE WITH RULE 17.1(a) OR (b)The Patent Office  
Concept House  
Cardiff Road  
Newport  
South Wales  
NP10 8QQ

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Signed 

Dated 18 September 2000

**Notes**

Please type, or write in dark ink using CAPITAL letters. A prescribed fee is payable for a request for grant of a patent. For details, please contact the Patent Office (telephone 071-438 4700).

Rule 16 of the Patents Rules 1990 is the main rule governing the completion and filing of this form.

Do not give trading styles, for example, 'Trading as XYZ company', nationality or former names, for example, 'formerly (known as) ABC Ltd' as these are not required.

**Warning**

After an application for a Patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977 and will inform the applicant if such prohibition or restriction is necessary. Applicants resident in the United Kingdom are also reminded that under Section 23, applications may not be filed abroad without written permission unless an application has been filed not less than 6 weeks previously in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction revoked.

# Request for grant of a Patent Form 1/77

Patents Act 1977

**1 Title of invention**

- 1 Please give the title of the invention **NEW ACTIVE MARINE ALKALOIDS**

**2 Applicant's details**☐ **First or only applicant**

- 2a If you are applying as a corporate body please give:

Corporate name **Instituto Biomar S.A.**

Country (and State of incorporation, if appropriate) **SPAIN**

- 2b If you are applying as an individual or one of a partnership please give in full:

Surname

Forenames

- 2c In all cases, please give the following details:

Address **Poligono Industrial, Edificio CEI  
Mod. 2.02 y 2.03  
24231-Onzonilla (LEON)  
SPAIN**

UK postcode (if applicable)

Country

ADP number (if known)

726-868003 IS

**2d, 2e and 2f:** If there are further applicants please provide details on a separate sheet of paper.

☐ **Second applicant (if any)**

2d If you are applying as a corporate body please give:

Corporate name

Country (and State  
of incorporation, if  
appropriate)

2e If you are applying as an individual or one of a partnership please give in full:

Surname

Forenames

2f **In all cases**, please give the following details:

Address

UK postcode  
(if applicable)

Country

ADP number  
(if known)

**③** An address for service in the United Kingdom must be supplied

Please mark correct box

**③ Address for service details**

3a Have you appointed an agent to deal with your application?

Yes ☒

No ☐ → go to 3b

↓  
please give details below

Agent's name

Marks & Clerk

Agent's address

57-60 Lincoln's Inn Fields  
LONDON

Postcode

Agent's ADP  
number

18001

**3b:** If you have appointed an agent, all correspondence concerning your application will be sent to the agent's United Kingdom address.

3b If you have not appointed an agent please give a name and address in the United Kingdom to which all correspondence will be sent:

Name

Address

Postcode

ADP number  
(if known)

Daytime telephone  
number (if available)

⑦ The answer must be 'No' if:  
 any applicant is not an inventor  
 there is an inventor who is not an  
 applicant, **or**  
 any applicant is a corporate body.

⑧ Please supply duplicates of  
 claim(s), abstract, description and  
 drawing(s).

Please mark correct box(es)

⑨ You or your appointed agent (see  
 Rule 90 of the Patents Rules 1990)  
 must sign this request.

Please sign here ➡

A completed fee sheet should  
 preferably accompany the fee.

## ⑦ Inventorship

7 Are you (the applicant or applicants) the sole inventor or the joint inventors

Please mark correct box

Yes ☐

No ☒

➡ **A Statement of Inventorship on Patents  
 Form 7/77 will need to be filed (see Rule 15).**

## ⑧ Checklist

8a Please fill in the number of sheets for each of the following types of  
 document contained in this application.

Continuation sheets for this Patents Form 1/77

Claim(s)

Description

Abstract

Drawing(s)

8b Which of the following documents also accompanies the application?

Priority documents (please state how many)

Translation(s) of Priority documents (please state how many)

Patents Form 7/77 – Statement of Inventorship and Right to Grant  
 (please state how many)

Patents Form 9/77 – Preliminary Examination/Search

Patents Form 10/77 – Request for Substantive Examination

## ⑨ Request

I/We request the grant of a patent on the basis of this application.

Signed *Marks & Clerk*

Date *10-9-99*  
 (day month year)

**Please return the completed form, attachments and duplicates  
 where requested, together with the prescribed fee to:**

☐ **The Comptroller  
 The Patent Office  
 Cardiff Road  
 Newport  
 Gwent  
 NP9 1RH**

or

☐ **The Comptroller  
 The Patent Office  
 25 Southampton Buildings  
 London  
 WC2A 1AY**

## NEW ACTIVE MARINE ALKALOIDS

The present invention relates to a new active alkaloids isolated from the mollusc *Jorunna funebris*.

### Summary of the Invention

Marine organisms, especially soft corals, sponges and tunicates, provide many secondary metabolites and exhibit a varying degree of biological activity (Faulkner, D.J. *Nat.Prod.Reports.*, 1999, 16, 155-198 and references cited therein).

The present invention provides new alkaloids having the following formula (I):

(I)

wherein  $R^1$  is selected from the group consisting of hydrogen, lower alkyl group and lower alkoxy group and  $R^2$  is selected from the group consisting of hydrogen and lower alkoxy. In the definitions of the groups in formula (I), the lower alkyl and the lower alkyl moiety of the lower alkoxy mean a straight-chain or branched alkyl group having 1 to 6 carbon atoms such as methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl, tert-butyl, pentyl, neopentyl and hexyl.

More particularly, the present invention relates to Jorumycin ( $R^1=H$  and  $R^2=Ac$  in formula (I)), extracted and isolated from the mollusc *Jorunna funebris*.

Jorumycin exhibits antitumor activity. In particular, Jorumycin exhibits antitumor activity against cell lines derived from human solid tumors, such as human lung carcinoma, human colon carcinoma and human melanoma, and, the like, it is active against other tumor cell lines, like leukemia and lymphoma.

The present invention also provides a method of treating a mammal affected by a malignant tumor sensitive to a compound with the formula (I), which comprises administering a therapeutically effective amount of the compound with the formula (I), or a pharmaceutical composition thereof.

The present invention further provides pharmaceutical compositions which contain as active ingredient a compound with the formula (I), as well as a process for its preparation.

A further aspect of the invention is a method for preparing the compound Jorumycin ( $R^1=H$  and  $R^2=Ac$  in the formula (I)), which comprises extraction and isolation from the mollusc *Jorunna funebris*.

### **Preferred Embodiments of the Invention**

Examples of pharmaceutical compositions include any solid (tablets, pills, capsules, granules, etc.) or liquid (solutions, suspensions or emulsions) with suitable formulation of oral, topical or parenteral administration, and they may contain the pure compound or in combination with any carrier or other pharmacologically active compounds. These compositions may need to be sterile when administered parenterally.

The correct dosage of a pharmaceutical composition comprising compounds with the formula (I), will vary according to the pharmaceutical formulation, the mode of application, and the particular situs, host and tumor being treated. Other factors like age, body weight, sex, diet, time of administration, rate of excretion, condition of the host, drug combinations, reaction

---

---

sensitivities and severity of the disease shall be taken into account. Administration can be carried out continuously or periodically within the maximum tolerated dose.

### **Antitumour Activity**

Cells were maintained in logarithmic phase of growth in Eagle's Minimum Essential Medium, with Earle's Balanced Salts, with 2.0 mM L-glutamine, with non-essential amino acids, without sodium bicarbonate (EMEM/nea); supplemented with 10% Fetal Calf Serum (FCS),  $10^{-2}$  M sodium bicarbonate and 0,1 g/l penicillin-G + streptomycin sulfate.

A screening procedure has been carried out to determine and compare the antitumor activity of these compounds, using an adapted form of the method described by Bergeron et al. (Raymond J. Bergeron, Paul F. Cavanaugh, Jr., Steven J. Kline, Robert G. Hughes, Jr., Gary T. Elliot and Carl W. Porter. Antineoplastic and antiherpetic activity of spermidine catecholamide iron chelators. *Biochem. Bioph. Res. Comm.* **1984**, *121*, 848-854). The antitumor cells employed were P-388 (suspension culture of a lymphoid neoplasm from DBA/2 mouse), A-549 (monolayer culture of a human lung carcinoma), HT-29 (monolayer culture of a human colon carcinoma) and MEL-28 (monolayer culture of a human melanoma).

P-388 cells were seeded into 16 mm wells at  $1 \times 10^4$  cells per well in 1 ml aliquots of MEM 5FCS containing the indicated concentration of drug. A separate set of cultures without drug was seeded as control growth to ensure that cells remained in exponential phase of growth. All determinations were carried out in duplicate. After three days of incubation at 37°C, 10% CO<sub>2</sub> in a 98% humid atmosphere, an approximately IC<sub>50</sub> was determined by comparing the growth in wells with drug to the growth in wells control.

A-549, HT-29 and MEL-28 cells were seeded into 16 mm wells at  $2 \times 10^4$  cells per well in 1 ml aliquots of MEM 10FCS containing the indicated concentration of drug. A separate set of cultures without drug was seeded as control growth to ensure that cells remained in exponential phase of growth. All determinations were carried out in duplicate. After three days of incubation at 37°C, 10% CO<sub>2</sub> in a 98% humid atmosphere, the wells were stained with 0.1%

---

---

Crystal Violet. An approximately  $IC_{50}$  was determined by comparing the growth in wells with drug to the growth in wells control.

The results are given in the following table:

	$IC_{50}$ ( $\mu M$ )			
	P-388	A-549	HT-29	MEL-28
Jorumycin	0.02	0.02	0.02	0.02

### Antitumour Activity

Jorumycin showed also activity against Gram-positive bacteria (Staphylococcus and others).

### Extraction and Isolation

Jorumycin has been isolated from the mollusc *Jorunna funebris* (Mollusca: Nudibranchia: Doridina: Kentrodorididae) collected off Mandapam (India) in April 1998. The product is present in the extract of both the mucus and mantle of the nudibranch. In a typical procedure, the frozen biological sample (mucus or animal body) was extracted with acetone. After removing the organic solvent at reduced pressure the residue was partitioned between water (15 mL) and ethyl acetate. The water phase was extracted for three times with ethyl acetate (on the whole 34 mL). The oily residue obtained by removing of the organic solvent at reduced pressure was fractionated by Sephadex LH-20 chromatography following the elution of the extract components by  $SiO_2$ -TLC ( $CHCl_3/MeOH$  95:5,  $R_f$  = 0.4). The final purification of Jorumycin was obtained by sequential  $SiO_2$  chromatographies ( $CHCl_3/MeOH$ ) and HPLC (Sherisorb S5W analytical column, isocratic elution with: n-hexane/ $CHCl_3$ /TEA 90:10:10, detector: Waters R401

differential refractometer). The product is soluble in  $\text{CHCl}_3$ ,  $\text{CH}_2\text{Cl}_2$ , MeOH. It is highly unstable in acid and basic media.

**Jorumycin:** ( $\text{C}_{27}\text{H}_{30}\text{N}_2\text{O}_9$ );  $[\alpha]_D = -57^\circ$  ( $c$  0.05  $\text{CHCl}_3$ ); IR (liquid film) 3310, 1731, 1700  $\text{cm}^{-1}$ ; UV (MeOH) 268 nm ( $\epsilon=15000$ );  $^1\text{H}$ -NMR ( $\text{CDCl}_3$ )  $\delta$  1.25 (m, 1H), 1.75 (s, 3H), 1.93 (s, 3H), 1.96 (s, 3H), 2.24 (d, 1H,  $J=20.1$  Hz), 2.26 (s, 3H), 2.65 (dd, 1H,  $J=20.1$  and 7.3 Hz), 2.84 (dd, 1H,  $J=16.7$  and 2.1 Hz), 3.16 (bdt, 1H,  $J=12.0$ , 2.7 and 2.7 Hz), 3.18 (bs, 1H), 3.82 (dd, 1H,  $J=11.2$  and 3.5 Hz), 3.90 (bs, 1H), 3.98 (s, 3H), 4.00 (bs, 3H), 4.36 (bm, 1H), 4.40 (bs, 1H), 4.42 (dd, 1H,  $J=11.2$  and 3.7 Hz);  $^{13}\text{C}$ -NMR ( $\text{CDCl}_3$ )  $\delta$  185.8 (s), 181.3 (s), 170.0 (s), 155.7 (s), 155.0 (s), 141.9 (s), 141.7 (s), 137.2 (s), 128.8 (s), 128.4 (s), 113.8 (s), 109.4 (s), 83.0 (d), 64.2 (t), 61.0 (d), 57.7 (d), 56.1 (d), 54.4 (d), 52.6 (d), 41.3 (q), 25.5 (t), 20.7 (q), 20.6 (t), 8.8 (q), 8.7 (q); ESMS ( $m/z$ ) 526 (20,  $\text{M}^+$ ), 508 (100,  $\text{M}-\text{H}_2\text{O}$ ), 494 (10,  $\text{M}-32$ ). HRESMS ( $m/z$ ) 508.189 ( $\Delta + 5$  mmu).

The present invention also provides use of the compound of formula 1 in the preparation of a medicament for the treatment or prophylaxis of tumours.
